PROFESSIONAL SUMMARY

Site Reliability Engineer with 7+ years of expertise in cloud infrastructure, automation, observability, and enterprise-scale system migrations. Proven track record of reducing deployment times by 56%, managing 800+ server migrations, and maintaining 99.8% deployment success rate. Deep experience in APM/RUM instrumentation, OpenTelemetry-based observability platforms, and toil reduction automation across AWS and Azure environments. Specialized in Kubernetes, Terraform/IaC, CI/CD pipelines, DataDog, LGTM stack, and SRE transformation initiatives for Fortune 500 clients including Toyota, Charter Communications, Comcast, and Oracle. Currently driving SRE transformation and backend-agnostic observability platform engineering at Hitachi Digital Services.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, EKS, ECS Fargate, Lambda, VPC, IAM, CloudFront, SNS/SQS, API Gateway, Route53, ALB/NLB), Azure (AKS, Container Apps, App Gateway, Confluent Kafka), GCP, Kubernetes, Docker, OpenShift, Rancher, Helm, Terraform, Terragrunt, Pulumi, CloudFormation, Ansible, Kong API Gateway

DevOps & Automation: Jenkins, ArgoCD, GitHub Actions, GitOps, GitLab, Git, CI/CD Pipeline Development, Configuration Management, Python, Bash, Linux Administration

Observability & Monitoring: OpenTelemetry (OTel Collector, Contrib Distro, SDK instrumentation), DataDog (APM, RUM, Logs, Monitors, Dashboards), Prometheus, Grafana, Loki, Tempo, Mimir (LGTM Stack), ELK/OpenSearch, PagerDuty, ServiceNow Webhooks, Nagios

Data & Databases: MongoDB, MySQL, PostgreSQL, Aurora DB, Redis, Kafka, SQL

Standards & Practices: SLI/SLO/SLA, Error Budgets, Incident Management, Toil Reduction, SOC2/HIPAA, ITIL, ServiceNow, Agile/Scrum, RBAC, FinOps/Cost Optimization

PROFESSIONAL EXPERIENCE

Hitachi Digital Services

Senior Site Reliability Engineer — SRE Transformation | Bengaluru, India | Dec 2025 – Present

Project 1: TMNA (Toyota Motors North America) — APM/RUM Observability Platform (Dec 2025 – Apr 2026)

- Led end-to-end DataDog APM and RUM instrumentation across 9 Toyota applications spanning 200+ repositories (Lambda, ECS Fargate, EKS Fargate) — covering Java backends and Angular frontends with dynamic distributed tracing and custom RUM metrics.
- Engineered a centralised email-to-DataDog ingestion pipeline using cron-driven scripts to process 15,000–18,000 daily incident emails; automated parsing of subject, body, and timestamp fields, pushing 1,000 emails per 8-minute cycle via DataDog API — reducing triage time from hours of manual effort to near-real-time alert routing.
- Applied Grok parsers and DataDog reference table enrichment to filter false positives and de-duplicate repetitive incidents, significantly improving signal-to-noise ratio across all Toyota support teams.
- Built ~180 monitors (approx. 20 per application) integrated with ServiceNow webhooks and PagerDuty for automated incident creation and escalation, replacing manual email-based triage workflows.
- Eliminated 5–6 hours of daily manual health check toil through Python/Bash automation scripts covering storage housekeeping, API Gateway configuration updates, and routine infrastructure validation.
- Authored onboarding documentation and reusable templates for DataDog instrumentation, CUJ dashboards, and L1 operational dashboards — standardising observability practices across all TMNA project teams.
- Collaborated cross-functionally with dev, support, and platform teams to define and align on SLI/SLO targets for critical Toyota application workflows.

Project 2: MPSD — Operational Agentic AI (OAA) Platform — Backend-Agnostic Observability (Apr 2026 – Present)

- Designing and implementing a backend-agnostic observability platform using OpenTelemetry Contrib Collector for an agentic AI platform (OAA) built on Azure, supporting 18 managed microservices alongside Azure-managed components (Confluent Kafka, PostgreSQL, Redis, App Gateway).
- Deploying OTel Contrib Collector with multi-exporter support (LGTM, vendor backends) enabling plug-and-play observability — customers can route telemetry to their own vendor stack or use the bundled LGTM stack without application changes.
- Instrumenting Python-based OAA microservices using a platform-native SDK that embeds OpenTelemetry SDK alongside proprietary libraries, ensuring consistent trace/metric/log collection across all Kafka-connected orchestration, ingestion, and enrichment agents.

- Building Helm chart-based deployment for the observability stack (Loki, Grafana, Tempo, Mimir) on AKS as an optional sidecar offering — infrastructure kept fully separate from OAA workloads to maintain deployment independence.
- Configuring OTel collector pipelines with processors, receivers, and exporters to capture inter-agent Kafka topic telemetry, enabling full observability across the internal agent communication fabric.

Signeasy

Senior Site Reliability Engineer — Infrastructure Automation & Cost Optimization | Bengaluru, India | Jan 2025 – Dec 2025

- Optimized Docker images across 30+ microservices using multi-stage builds, Alpine base images, and layer caching — reducing average image size from 850MB to 320MB (62% reduction), cutting ECR storage costs and deployment times.
- Migrated CI/CD pipelines to GitHub Actions with parallel job execution and intelligent caching, reducing average build time from 18 to 9 minutes and decreasing AWS CodeBuild costs by ~30%.
- Contributed to SOC2 and HIPAA compliance framework implementation using Vanta integration with AWS for vulnerability management and regulatory audit readiness.
- Participated in annual disaster recovery exercise, successfully migrating data flow from us-east-1 to us-west-2 using scripted failover procedures.
- Led migration of 30+ services from traditional Kubernetes manifests to standardised Helm chart deployments, improving release consistency and rollback reliability.
- Contributed to Terraform/Terragrunt IaC transformation of manual infrastructure provisioning, reducing configuration drift and improving environment reproducibility.
- Managed multi-tier monitoring strategy using Prometheus/Grafana (lower environments) and DataDog/PagerDuty (production), while maintaining Elasticsearch/Logstash for platform search.
- Part of 3-member team targeting 25% AWS cost reduction through Kong API Gateway migration and rightsizing initiatives.

TransUnion (Neustar Acquisition)

Developer — SRE & Network Infrastructure | Bengaluru, India | Dec 2022 – Jan 2025

- Orchestrated migration of 800+ servers from on-premises to private EKS clusters supporting $1B+ revenue telecom clients including Charter Communications, Comcast, and Oracle.
- Executed 200+ production deployments with 99.8% success rate, managing 50+ weekly releases for Order Management System serving major US carriers.
- Implemented comprehensive monitoring for 50+ microservices and 100+ applications using ELK Stack, Prometheus, and Grafana.
- Led OS migration from CentOS/RHEL to AlmaLinux across production infrastructure, enhancing security compliance and end-of-life risk.
- Developed Ansible automation playbooks reducing manual configuration tasks by 75%.
- Provided 24/7 on-call support for critical OMS applications handling telecom port-in/port-out operations.

Tata Consultancy Services

System Engineer — Platform Automation & Infrastructure | Bengaluru, India | Dec 2021 – Dec 2022

- Led development of 'Kanryo' — a GitOps-based SaaS platform using Kubernetes, Rancher, OpenShift, GitHub Actions, and ArgoCD, managing and mentoring 15 engineers.
- Optimized Jenkins CI/CD pipelines reducing build times from 45 to 20 minutes (56% improvement) through strategic caching and Node.js/React pipeline streamlining.
- Built Azure AKS clusters and implemented Infrastructure as Code using Terraform; enhanced Prometheus/Grafana monitoring with custom alerting capabilities.

Capgemini

Associate Consultant — Infrastructure & Observability | Mumbai, Bangalore, Chennai | Aug 2018 – Nov 2021

- Architected enterprise-wide ELK Stack migration from legacy Nagios for Royal Mail, reducing operational costs by 40% and improving incident resolution time by 60%.
- Led 10-member support team managing critical Royal Mail infrastructure with 99.5% SLA compliance.
- Designed and implemented big data cluster (Kafka-based) for US mail processing, successfully onboarding 8 enterprise clients within 6 months.
- Onboarded RPA and PDA systems to ELK Stack with custom Logstash filters and dashboards for HCL Technologies and TCS UK.
- Established ITIL processes via ServiceNow for incident, change, and problem management; introduced SonarQube and Nexus Repository for code quality and artifact management.

EDUCATION

Bachelor of Technology — Electrical and Electronics Engineering | 2014–2018

Vellore Institute of Technology (VIT), Vellore, India — CGPA: 8.48/10 (First Class with Distinction)

- Published research paper on Emotion Recognition using Machine Learning and Neuroscience.
- Completed internships at Schneider Electric, TE Connectivity, and BEML Limited.

KEY PROJECTS & ACHIEVEMENTS

Toyota TMNA — Incident Email Automation Pipeline | Hitachi DS (2025–2026)

- Built automated ingestion pipeline processing 15k–18k daily incident emails into DataDog at 1,000 emails/8-minute cycles via API, with Grok parsing and reference table enrichment — eliminating missed incidents and reducing triage time by eliminating manual email monitoring entirely.

Toyota TMNA — APM/RUM Full-Stack Instrumentation | Hitachi DS (2025–2026)

- Instrumented 9 Toyota applications (200+ repositories) across Lambda, ECS Fargate, and EKS Fargate with DataDog APM (Java) and RUM (Angular), deploying ~180 monitors with ServiceNow and PagerDuty integration.

OAA Backend-Agnostic Observability Platform | Hitachi DS (2026–Present)

- Designing plug-and-play OpenTelemetry Contrib Collector architecture for 18-service agentic AI platform on Azure — enabling telemetry routing to any vendor backend or bundled LGTM stack via Helm chart deployment.

CI/CD Pipeline Optimization & Docker Image Reduction | Signeasy (2025)

- Reduced Docker image sizes from 850MB to 320MB (62%) across 30+ microservices; cut build times from 18 to 9 minutes via GitHub Actions with parallel execution — achieving ~30% AWS CodeBuild cost reduction.

Kubernetes Migration at Scale | TransUnion (2023–2024)

- Migrated 800+ servers to private EKS clusters with 99.8% deployment success rate across 200+ production releases for $1B+ revenue telecom clients.

ELK Stack Enterprise Migration | Capgemini (2020–2021)

- Replaced legacy Nagios with ELK Stack for Royal Mail, reducing costs by 40% and incident resolution time by 60% — onboarding 8 enterprise clients to big data cluster within 6 months.
